

What is METCA?

Millsap Educators Technology Competencies Assessment is a program to assess that teachers are able to perform minimal technology competencies as determined by the International Society for Technology in Education.

Note: This is an assessment and not a training program. If you are unable to complete this assessment, you are welcome to use youtube.com or other programs to build your understanding. If you need more aid, feel free to contact Alex Soles (asoles@millsapisd.net).

Who is required to complete METCA?

All instructional staff members are required to complete METCA.

When is the program due?

Instructional staff members are to complete all of the assessments by the end of their first contracted year of employment with the exception of 2014-2015 hires who have the 2015-2016 school year to complete Tier 1.

Why is METCA necessary?

Part of the district's mission is to prepare students for productive lives beyond their secondary education. The proliferation of technology in almost every aspect of the workforce demands that Millsap students demonstrate 21st Century Skills to be successful beyond high school. Therefore, it is important for staff to demonstrate their ability to use basic technological skills in their instruction.

Where do we submit our work?

metca@millsapisd.net

Can I wait to submit everything at once?

Yes, but it would be better to submit it after you complete each assessment. This allows us to provide feedback. In the event that there is a problem or an issue, it may save you some effort on other assessments.

What if I do not meet certain standards on an assessment?

You are permitted to correct mistakes. The goal is that you possess a level of ability and knowledge necessary to facilitate the desired skills for our students.
